Delhi, India

## PROFESSIONAL SUMMARY

Results-driven Software Engineer specializing in Java backend development, with hands-on experience building scalable microservices using Spring Boot, Spring Security, and Spring Data JPA. Skilled in designing REST APIs and gRPC-based inter-service communication, containerizing applications with Docker, and integrating SQL/NoSQL databases (MySQL, MongoDB, and Redis). Proficient in React.js for full-stack development, with a strong foundation in Data Structures, Algorithms, OOP, and DBMS, and a track record of delivering production-quality, well-tested code

## EDUCATION

B.Sc. (Hons.) Computer Science 2023 - 2026

Ramanujan College, University of Delhi

## PROJECTS

### Patient Management System

- Architected a scalable, microservices-based healthcare platform using **Java** and **Spring Boot**, structuring a **Maven** multi-module project with clean architecture for high maintainability.
- Developed a Patient Service exposing secure RESTful APIs with Spring Security and JWT-based access control to manage patient records via full CRUD operations
- Implemented a Billing Service that communicates with the Patient Service using gRPC, reducing inter-service latency by 35% compared to traditional REST calls
- Applied DTO design patterns and centralized exception handling to enforce data validation and improve API reliability across services
- Containerized all microservices with Docker and validated endpoints using Postman, ensuring consistent, reliable deployment across environments

### Movie Ticket Booking Backend

- Built a scalable backend for a movie ticket booking platform using Spring Boot and MongoDB Atlas, exposing RESTful APIs for movie listings, bookings, and user management
- Engineered a Redis-based temporary seat-locking mechanism to prevent double-booking during high-concurrency transactions, ensuring data consistency across simultaneous requests.
- Integrated the Razorpay payment gateway to handle secure, real-time online payment processing and transaction verification
- Secured system endpoints utilizing JWT authentication and implemented a DTO design pattern, improving code maintainability and overall API testability.

## TECHNICAL SKILLS

### Backend

Spring Boot · Spring MVC ·

Spring Security · Spring Data JPA ·

REST APIs · Microservices · gRPC ·

JWT Authentication

### Frontend

React.js · HTML · CSS · JavaScript

### Databases

MySQL · MongoDB · Redis

### DevOps & Tools

Docker · Git · GitHub · Maven · Postman ·

IntelliJ IDEA · VS Code · JMeter

### Core Subjects

Data Structures & Algorithms ·

Operating Systems · DBMS ·

Computer Networks · OOP · SDLC
